

AUSTIN K. GARDNER

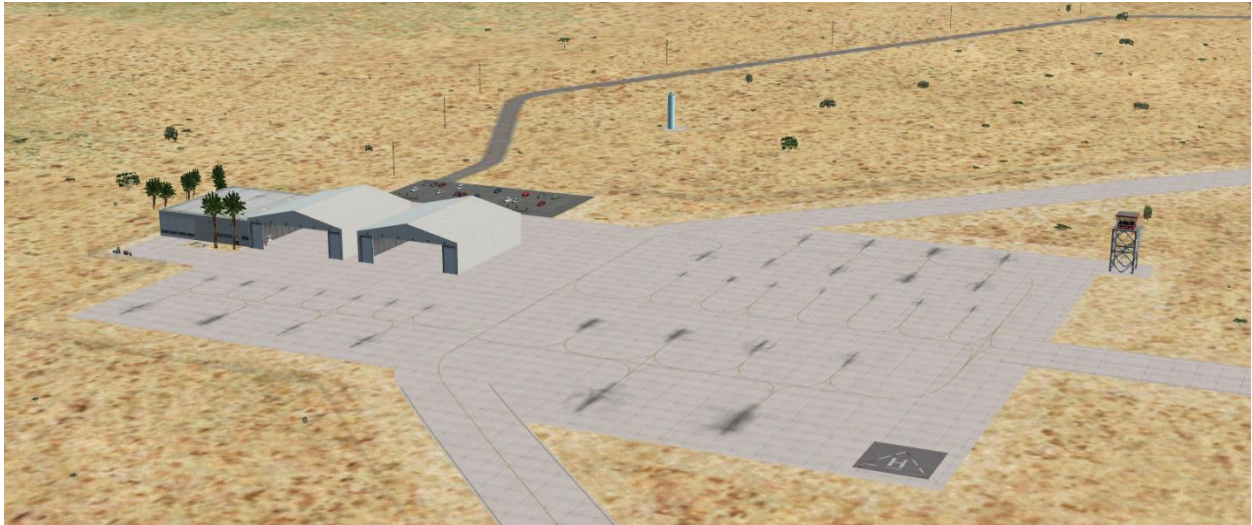

Created for FSX Gold with the Acceleration Expansion Pack.

Not tested with FSX Standard or Deluxe, however this scenery should perform fine with all versions of FSX. Not tested with FS2004, or FS2002, so use with these sims is not recommended.

FIRESTORM RANCH serves as headquarters for FireStorm, a solo aerobatic display pilot flying the ARX-5R Coyote. Its layout caters directly to training and perfecting aerobatic maneuvers in between airshows. White Sands and Carrizozo are right nearby, along with the beautiful lava beds of the Carrizozo Malpais. It has its own solar farm and water tower, along with maintenance and storage hangers. Its main 3500' runway can handle airplanes up to a DC-3, or a Learjet if you're feeling bold. For the more competitive type, there is a race course to the southeast nearby, draped over a small mountain.

THE MAIN RAMP

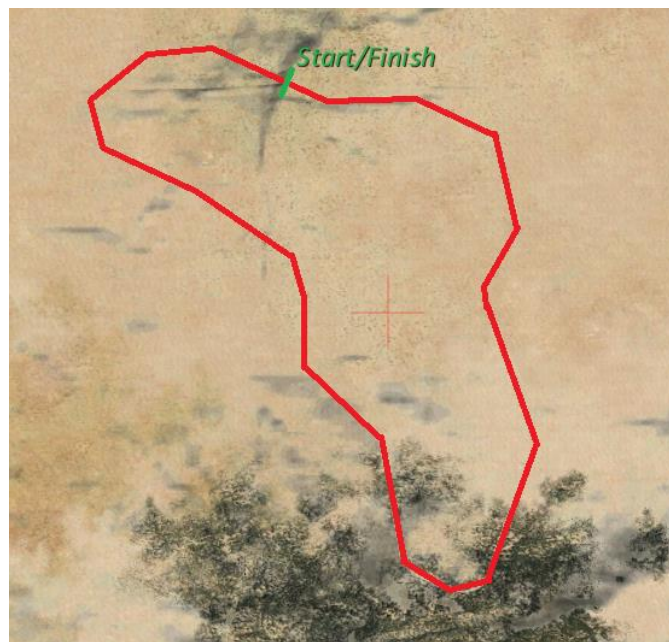

This is the main operations area of the Ranch. It boasts many parking spots for airplanes ranging from ultralights to DC-3s. The northern hanger serves as the maintenance facility and offices, while the southern hanger is for storage and miscellaneous use. The main ramp also has an observation tower for personnel to survey the airport, as well as serving as prime seats for FireStorm practice sessions.

THE SOUTH RAMP

This is the nest of FireStorm. The hanger here stores, maintains, and operates the custom ARX-5R. It also serves as an office for coordination with airshow officials. The fuel station and compass rose are also located here. Two short runways, one 1530' and the other 650', are for practicing STOLs.

THE TRACK

The racetrack is about 8 miles southeast of the Ranch, marked by inflatable pylons and a dirt road. It is a difficult course not for the faint of heart, with extreme elevation changes and blind corners. The start/finish gate is on a mountain ridge, and is immediately followed by a shear drop to gate 1. The course is to be flown in a counter-clockwise direction.

AIRPORT INFORMATION

NM95

Elevation: 5050 ft. ASL

Variation: 9°E

Designated Helipads: 1

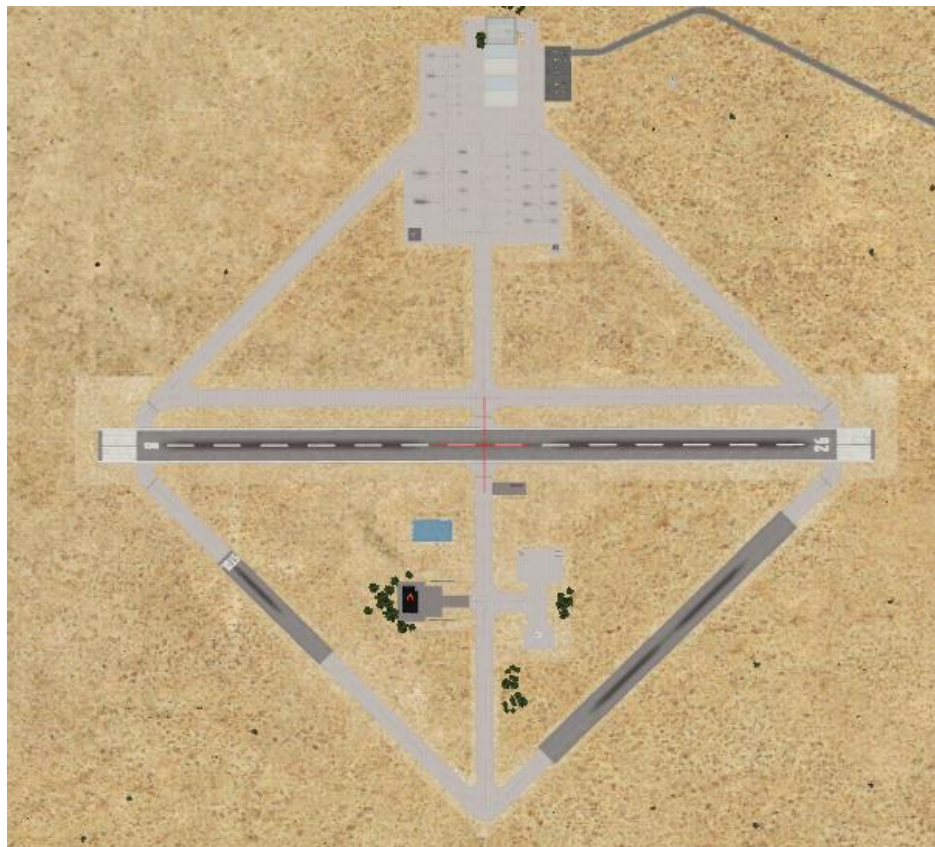

Runway 8/26: 3500 ft. x 150 ft. (asphalt)

Runway STOL: 1530 ft. x 110 ft. (asphalt)

Runway STOL: 650 ft. x 110 ft. (asphalt)

Aircraft capability: Up to and including DC-3

Instrument Approach: n/a
